# Performance Service

30 days to better site performance

Improve your site's performance so you can grow faster. Our team works to understand your near- and long-term plans, analyze current site bottlenecks, and deliver tailored recommendations. We then partner with your engineering team or agency to make sure the necessary improvements are realized.

Discovery & Kickoff

Determine existing pain points, outcomes, and goals, and meet for a kickoff call to align plans and finalize discovery.

Application Testing & Analysis

Perform load tests and application analysis to uncover performance bottlenecks.

Post-Review Support

2 weeks of access to Services Engineers to support with implementation.

Observations & Recommendations

Compile test results, observations, and recommendations, and meet to review the findings.

Executive Summary

Compile an executive summary recapping the objectives, observations, and outcomes of the engagement.

Closure

Post-engagement survey & handoff.

Resolve current challenges

Find the root cause of your current performance challenges. Our skilled engineers perform rigorous testing to help you find the root cause of current slowdowns and then provide detailed and actionable fixes.

Improve Core Web Vitals

Improve your SEO. Search engines penalize you based on failing key performance benchmarks across different devices. We dive deep into your code to identify what's impacting your ranking and provide advice on improving.

Plan for growth

Get ahead of your site's trajectory. We analyze how your current code will stack up if your traffic grows exponentially. And help you proactively prepare your site before rogue issues impact your business.
